DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the galvo-motorized focus assembly (of claim 15) must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 3-11, 13 and 16-28 are rejected under 35 U.S.C. 102(b) as being anticipated by Kelley et al. (5923473).

Kelley discloses (refer to figures 3-12) the components necessary to make and use the invention as recited in claims 1, 3-11, 13 and 16-28. For example, Kelley discloses a focusing assembly (230), a feedback positioning device (460) associated with said focusing assembly and a computer processor (410') interconnected as claimed. With regard to audible warnings, computers are routinely used to provide warnings in various capacities including audible warning such as with horns, alarms and etc.

The examiner takes official notice that this is an inherent feature of computer processing systems.

Allowable Subject Matter

4. Claims 14 and 15 are allowed.
5. Claims 2 and 12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
6. The following is an examiner's statement of reasons for allowability: The prior art taken either singularly or in combination fails to anticipate or fairly suggest the limitations of the independent claim(s), in such a manner that a rejection under 35 U.S.C. 102 or 103 would be proper. The prior art fails to teach a combination of all the claimed features as presented in claim(s) 2 and 12, wherein the claimed invention comprises a feedback positioning device being one of a group selected from a variety of claimed encoders, a resolver, a Heidenheim scale, digital length gauge systems, phase device, magnetic strip reader, and transducer, as claimed. The prior art fails to teach a combination of all the claimed features as presented in claim(s) 2 and 12, wherein the claimed invention comprises a galvo-motorized focusing assembly in addition to a laser source, a linear encoder and a computer processor, as claimed. The combination of all the claimed features are not anticipated or made obvious by the prior art.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Pasch (5247153), Lo (6462814) and Kelley et al. (6043843) are cited for disclosing a focusing device with a processor for controlling the focusing.
